

COMPLIANCE SERVICES SUITE

software services

Gain visibility and control over PC assets for maximum compliance

From regulations such as Sarbanes-Oxley, HIPAA, GLBA and PCI to the auditing activities of the Business Software Association (BSA), getting into compliance and staying that way is not as simple as it once was. The explosive growth of the Internet and mobile workforces has put a tremendous strain on IT resources—gaining visibility and control over desktop and laptop PCs is extremely costly and time consuming. And then there is the issue of establishing repeatable processes for measuring future compliance and adherence to corporate standards. This makes having a comprehensive, reliable, and cost-effective compliance solution critical to the success of your business.

The Everdream Compliance Services Suite consists of the Asset Discovery, Asset Management, and Software Distribution software services enabling real-time management visibility and control of PC hardware and software assets regardless of their location.

The Everdream Control Center provides a single window into the compliance status of your global desktop and laptop PCs regardless of their location.

Achieve Complete Compliance Through On-Demand Software Services

COMPLIANCE SERVICES SUITE

Built around a powerful and cost effective Software-as-a-Service (SaaS) model, the Everdream Compliance Services Suite is a complete, integrated offering of on-demand software services including Asset Discovery, Asset Management, and Software Distribution. It enables real-time management visibility into PC hardware and software assets, tracks software license usage, automatically distributes software, and ensures regulatory and license compliance regardless of the PCs' location. The software services in the Compliance Services Suite can be purchased as a suite or individually depending on your specific compliance needs.

Advantages

- > Regulatory and license compliance for desktop and laptop PCs
- > Reduced cost and burden on IT for compliance
- > Rapid deployment
- > Centralized management and reporting

ASSET DISCOVERY

The Everdream Asset Discovery software service enables IT administrators to scan their networks to discover, identify, and inventory all IP-based devices including desktops, laptops, servers, printers, and routers.

- Select Company View
- Customize this Page: Modify the contents of this page, display different data, or change the chart types
- User Profile: Change your password, update your contact info, or change your settings

Advantages

- > Discovers all IP-based assets for accurate financial reporting and asset management.
- > Collects relevant device data including device type (e.g., workstation, printer, router, etc.), IP address, MAC address, Windows user name, domain name, and more.
- > Identifies all changes to a network environment through flexible and recurring scheduling of discovery scans including one-time, weekly, and monthly and will work across multiple networks.
- > Reveals unknown security risks by identifying all open ports of scanned devices.
- > Provides detailed management reports of all assets via an intuitive dashboard interface.

ASSET MANAGEMENT

The Everdream Asset Management software service provides ongoing visibility and control over every desktop and laptop in your company. A simple Internet connection is all that is needed to track your company's desktops and laptops, regardless of their location.

Advantages

- > Eliminates error-prone inventory collection through automated discovery and tracking of all installed PC software and hardware.
- > Ensures software contract compliance by flagging unauthorized software and identifying in-use software that exceeds licensed quantities.
- > Facilitates the reallocation of unused licenses through usage tracking reports.
- > Ensures effective end-of-warranty and end-of-lease management by tracking asset-level financial information including purchase cost, vendor details, warranty information, and lease information.
- > Eliminates onsite support visits via LAN-based remote control.
- > Provides lifecycle information through move/add/change history tracking.
- > Centralizes compliance metric reporting via an intuitive dashboard interface.

SOFTWARE DISTRIBUTION

The Everdream Software Distribution software service enhances software distribution efficiency, increases compliance with software licensing agreements, and improves end-user productivity.

Advantages

- > Minimizes manual installs by IT administrators through automated Windows software distribution and upgrades, including Microsoft Installer (MSI) files and custom executables.
- > Provides deployed software status and ensures high success rates via troubleshooting logs.

- > Transfers data securely over the Internet by leveraging 128-bit SSL encryption.
- > Resumes partially completed downloads via checkpoint restart.
- > Manages data download rate and minimizes bandwidth usage via throttling algorithms.
- > Utilizes sign-posting messages for end users to minimize disruptions by alerting users of reboots and enabling them to postpone installations.
- > Enables end-users to request new applications through a self-service portal.
- > Centralizes software distribution reporting via an intuitive dashboard interface.

Technical Requirements

- > No server infrastructure required
- > No VPN connections required
- > Internet connection (56K or faster)
- > Internet Explorer 5.5 and above
- > Supported operating systems: Windows 2000, XP, and Vista
- > Requires 21MB disk space and 3MB RAM

Powered by Everdream's Management Platform

Everdream Asset Discovery, Asset Management, and Software Distribution are just a few of Everdream's services which are powered by its industry-leading on-demand desktop management platform and its client-based agent architecture. Everdream's multi-tenant platform delivers the latest capabilities to customers through a centralized, web-based management console at a fraction of the cost and time it takes traditional software vendors. It operates in a fully redundant SAS-70 Type II compliant data center, maintaining system and network security at all times.
